

# RAC 2000

Automatic line for stacking boxes

# RAC 2000

## Automatic and effective

Automatic system for stacking different types of boxes. Equipped with an automatic bypass system to dispense boxes to more than one lane, and with an optional module for turning and positioning boxes for those types of boxes stackable at 180°. Productivity of up to 2,000 boxes per hour.

We adapt to your needs. Contact us

### Box Rotator (Optional)

Option to rotate the boxes and stack them in reverse, optimizing space use and facilitating storage.

### Efficient Stacking

Configurable to stack in columns of 10 boxes or according to the programmed settings, optimizing space and improving organization.

## Pujolàs Benefits

Efficiency for stacking empty boxes.

Increases productive capacity.

Minimizes effort and increases operator safety.

### Stacker with Buffer

Stacking system with an integrated buffer, ensuring uninterrupted operation even during high-demand scenarios.

### Customizable Dimensions

Tailor-made conveyor belts, adjusted to the client's requirements and distance, for a perfect integration into any facility.

### Bypass System

Allows boxes to be redirected either to the stacking area or the production line, offering complete flexibility to adapt to any workflow.

### Hygienic Design

Manufactured in 304 stainless steel, meeting the highest hygiene standards, ideal for the food industry and other demanding environments.

# Performance and engagement for the food industry

With over 40 years of experience in the food industry sector, we have a strong track record of delivering **high-quality equipment**. **Pujolàs** designs, develops, and manufactures equipment for the production and processing of **food products**. We combine traditional techniques with the latest innovations to achieve high-quality results and significant added value. Efficiency and performance in every product are our commitment.
